# Tipologie di ictus ischemico

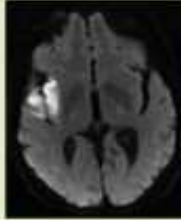

**Table 1 – Modified TOAST classification of ischemic stroke subtypes<sup>8</sup>**

1. Atherosclerosis of great vessels
2. Cardioembolism (excluding cases attributed to PFO/atrial septal defects)
3. Occlusion of small vessels (lacunar)
4. IS of another etiology (defined)
5. Two or more identified causes
6. Cryptogenic ischemic stroke

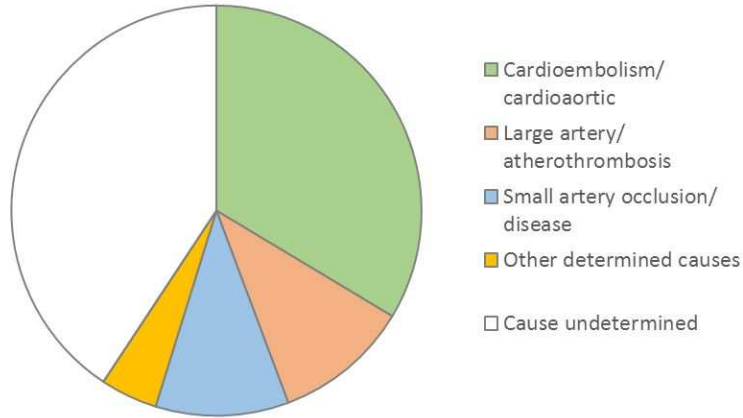

---

*PFO - patent foramen ovale; IS - ischemic stroke.*

## Oxfordshire Community Stroke Project (OCSP) classification: syndromes and imaging examples

OCSP term	Clinical features	Vascular basis	Example CT	Example MRI
<b>Total Anterior Circulation Syndrome (TACS)</b>	<ul style="list-style-type: none"> <li>• Hemiparesis <b>AND</b></li> <li>• Higher cortical dysfunction (dysphasia or visuospatial neglect) <b>AND</b></li> <li>• Homonymous hemianopia</li> </ul>	Usually proximal middle cerebral artery (MCA) or ICA occlusion		
<b>Partial Anterior Circulation Syndrome (PACS)</b>	<ul style="list-style-type: none"> <li>• Isolated higher cortical dysfunction <b>OR</b></li> <li>• Any two of hemiparesis, higher cortical dysfunction, hemianopia</li> </ul>	Usually branch MCA occlusion		
<b>Posterior Circulation Syndrome (POCS)</b>	<ul style="list-style-type: none"> <li>• Isolated hemianopia (posterior cerebral artery (PCA)) brainstem or cerebellar syndromes</li> </ul>	Occlusion of vertebral, basilar, cerebellar or PCA vessels.		
<b>Lacunar Syndrome (LACS)</b>	<ul style="list-style-type: none"> <li>• Pure motor stroke <b>OR</b></li> <li>• Pure sensory stroke <b>OR</b></li> <li>• Sensorimotor stroke <b>OR</b></li> <li>• Ataxic hemiparesis <b>OR</b></li> <li>• Clumsy hand-dysarthria</li> </ul>	Small penetrating artery occlusion, usually in lenticulostriate branches of MCA, or supply to brainstem or deep white matter		

# Stroke Subtype Classification to Mechanism-Specific and Undetermined Categories by A-S-C-O

Stroke 2010; 41: 1579-1586

## Causative Classification System (CCS)

Automated version of the SSS-TOAST (Arsava et al, Neurology 75 October 5, 2010) (<https://ccs.mgh.harvard.edu>)

5 Subtype CCS	8 Subtype CCS	16 Subtype CCS
Supra-aortic large-artery atherosclerosis	Supra-aortic large-artery atherosclerosis	Supra-aortic large-artery atherosclerosis
		Evident, probable, possible
Cardioaortic embolism	Cardioaortic embolism	Cardioaortic embolism
		Evident, probable, possible
Small-artery occlusion	Small-artery occlusion	Small-artery occlusion
		Evident, probable, possible
Other uncommon causes	Other uncommon causes	Other uncommon causes
		Evident, probable, possible
Undetermined	Undetermined	Undetermined
	Unknown-cryptogenic embolism	Unknown-cryptogenic embolism
	Unknown-other cryptogenic	Unknown-other cryptogenic
	Unclassified	Unclassified
	Incomplete evaluation	Incomplete evaluation

## Introduction – ASCO/ASCOD – phenotypic approach

Proposed a new approach to stroke subtyping: 'stroke *phenotyping*' classification (i.e. stroke etiology and the presence of all underlying diseases, divided by grade of severity).

<b>ASCOD</b>	A-S-C-O-D: A for atherosclerosis, S for small vessel disease, C for cardiac source, O for other cause, D for dissection.
<b>Publication date</b>	2009/2013
<b>Type of system</b>	PHENOTYPIC
<b>Kappa for interexaminer reliability</b>	0,79
<b>Neuroimaging</b>	CT, MRI (HR)
<b>Vascular imaging</b>	US, CTA, MRA (HR/TOF/CE), ARTERIOGRAPHY, perfusion CT and MR, TEE, TCD
<b>Stenosis measure</b>	-
<b>Stenosis threshold</b>	≥70% (2009)/ ≥50% (2013)

<b>A</b>	ATHEROSCLEROSIS
<b>S</b>	SMALL VESSEL DISEASE
<b>C</b>	CARDIAC SOURCE
<b>O</b>	OTHER CAUSE
<b>D</b>	DISSECTION

GRADES OF PATHOLOGY	It is established a degree of likelihood of causality between the index ischemic stroke and each category:
<b>1</b>	Definitely a potential cause of the index stroke
<b>2</b>	Causality uncertain
<b>3</b>	Unlikely a direct cause of the index stroke (but disease is present)
<b>0</b>	Absence of disease
<b>9</b>	Grading is not possible due to insufficient work-up

# Cardioembolico

# Fonti cardioemboliche

**Table I** Potential cardioembolic sources

<b>Major risk sources</b>	<b>Minor or unclear risk sources</b>
Atrial fibrillation	Mitral valve prolapse
Recent myocardial infarction	Mitral annulus calcification
Previous myocardial infarction (LV aneurysm)	
Cardiomyopathies	Calcified aortic stenosis
Cardiac masses	
Intracardiac thrombus	Atrial septal aneurysm
Intracardiac tumours	
Fibroelastoma	Patent foramen ovale
Marantic vegetations	
Rheumatic valve disease (mitral stenosis)	Giant Lambl's excrescences
Aortic arch atheromatous plaques	
Endocarditis	
Mechanical valve prosthesis	

# Fonti cardioemboliche

Cardiac Source of Embolism	Total Patients
Atrial fibrillation	318 (79.1%)
Lone atrial fibrillation	
Associated with structural cardiac disease	
Hypertensive left ventricular hypertrophy	120 (29.8%)
Associated with atrial fibrillation	
Associated with atrial flutter	
Left ventricular systolic dysfunction	91 (22.6%)
Sinus rhythm	
Atrial fibrillation	
Rheumatic mitral valve disease	50 (12.4%)
Mitral annular calcification	40 (9.9%)
Mitral valve prolapse	5 (1.2%)
Atrial septal aneurysm with patent foramen ovale	4 (1%)
Degenerative heart valve disease	4 (1%)

**Prevention**

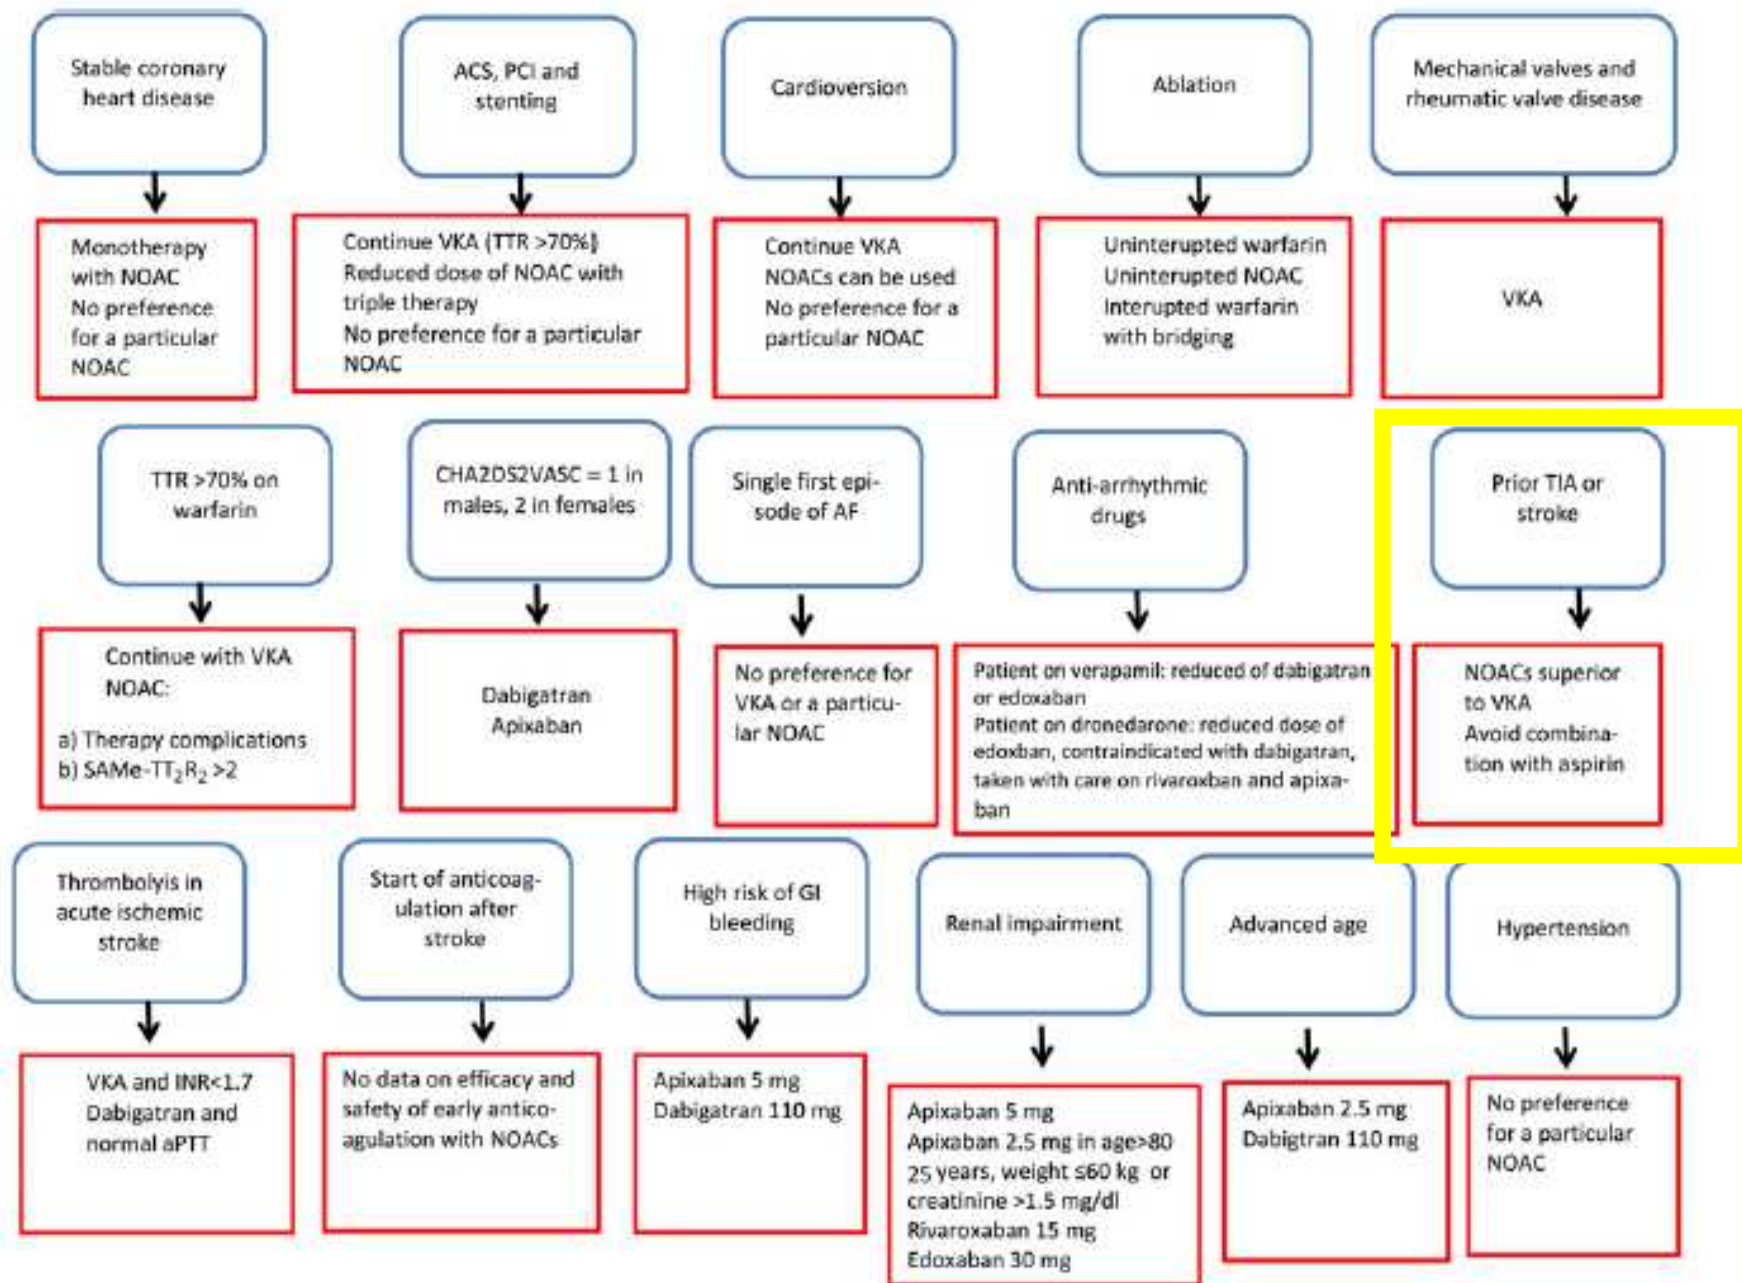

Figure 1 Summary of the treatment suggestions.

## Secondary stroke prevention

---

First choice	<u>NOACs as a group are superior to warfarin for secondary stroke prevention in patients with AF</u>
Comment	Aspirin should not be used for secondary stroke prevention in patients with AF. The combination of antiplatelet therapy plus OAC in patients with AF does not prevent major ischaemic events better than does OAC monotherapy and should be restricted to specific high-risk periods

# ESUS

## Criteria for diagnosis of ESUS:

- Stroke detected by CT or MRI that is not lacunar†
- Absence of extracranial or intracranial atherosclerosis causing  $\geq 50\%$  luminal stenosis in arteries supplying the area of ischaemia
- No major-risk cardioembolic source of embolism‡
- No other specific cause of stroke identified (eg, arteritis, dissection, migraine/vasospasm, drug misuse)

**Panel 1: Causes of embolic strokes of undetermined source**

**Minor-risk potential cardioembolic sources\***

*Mitral valve*

- Myxomatous valvulopathy with prolapse
- Mitral annular calcification

*Aortic valve*

- Aortic valve stenosis
- Calcific aortic valve

*Non-atrial fibrillation atrial dysrhythmias and stasis*

- Atrial asystole and sick-sinus syndrome
- Atrial high-rate episodes
- Atrial appendage stasis with reduced flow velocities or spontaneous echodensities

*Atrial structural abnormalities*

- Atrial septal aneurysm
- Chiari network

*Left ventricle*

- Moderate systolic or diastolic dysfunction (global or regional)
- Ventricular non-compaction
- Endomyocardial fibrosis

**Covert paroxysmal atrial fibrillation**

**Cancer-associated**

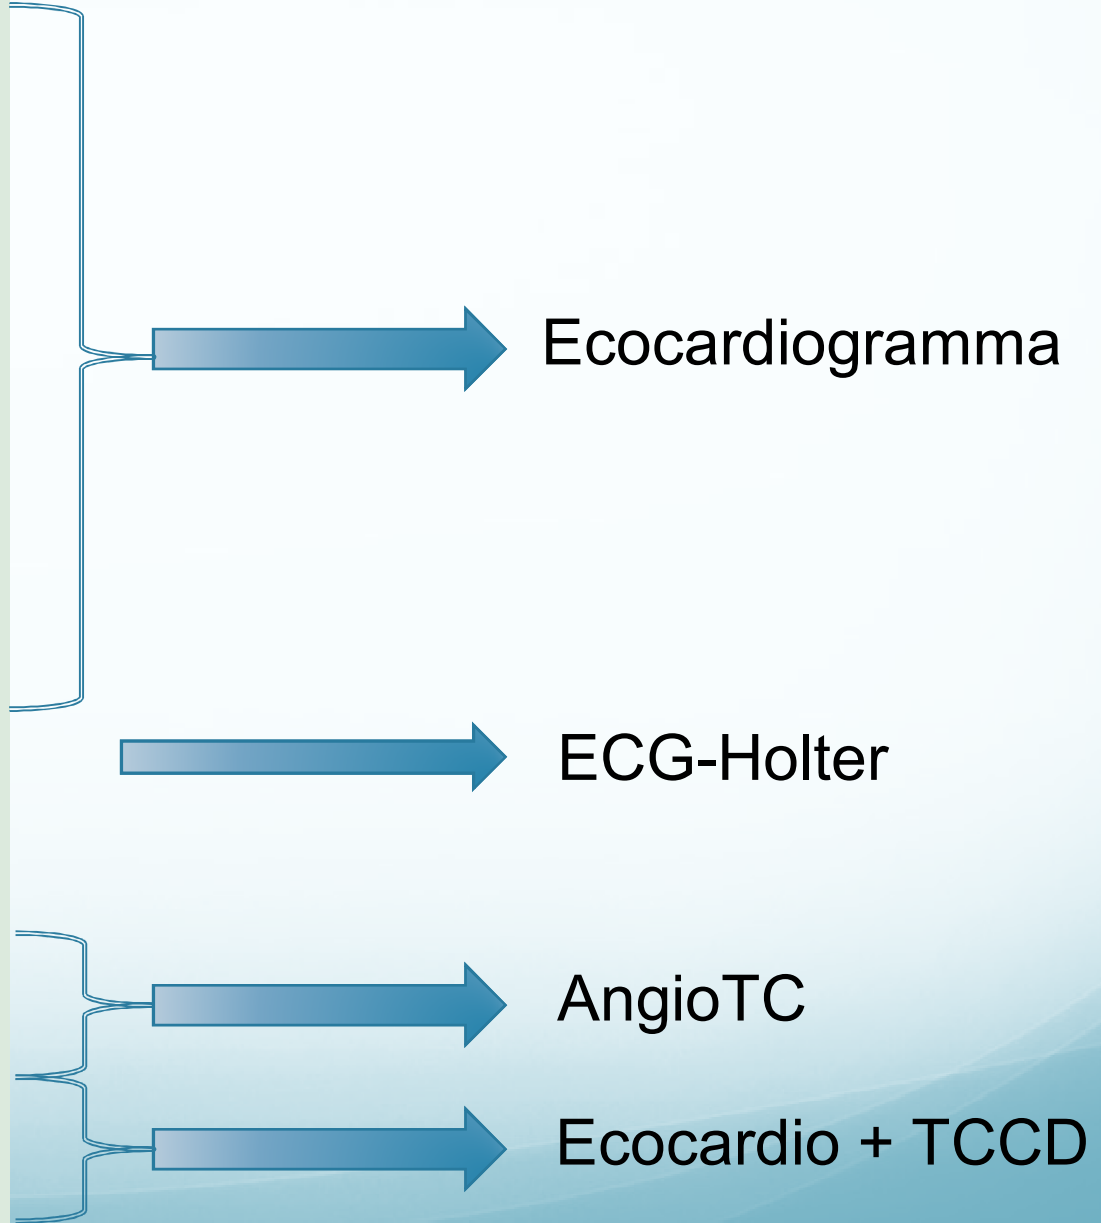

- Covert non-bacterial thrombotic endocarditis
- Tumour emboli from occult cancer

**Arteriogenic emboli**

- Aortic arch atherosclerotic plaques
- Cerebral artery non-stenotic plaques with ulceration

**Paradoxical embolism**

- Patent foramen ovale
- Atrial septal defect
- Pulmonary arteriovenous fistula
